

Installation Steps of ARM GCC Toolchain on Windows

1. Go to the url <https://developer.arm.com/tools-and-software/open-source-software/developer-tools/gnu-toolchain/gnu-rm/downloads>
2. Select the toolchain version

The screenshot shows the ARM Developer website's page for downloading the GNU Arm Embedded Toolchain. The page has a dark header with the 'armDeveloper' logo and navigation links. Below the header, there's a section for 'GNU-RM' with tabs for 'Overview', 'GNU-A', 'GNU-RM', 'Architecture Support', and 'Specifications'. The main content area explains that for Linux, Mac, and source packages, the `readme.txt` file is in the `share/doc/gcc-arm-none-eabi` folder, while for Windows packages, it's in the top-level folder. It also mentions that recent releases are available on this page and older releases can be found on Launchpad. A table lists the available toolchain versions:

Toolchain Version	Release Date
GNU Arm Embedded Toolchain: 10-2020-q4-major	December 11, 2020
GNU Arm Embedded Toolchain: 9-2020-q2-update	June 30, 2020
GNU Arm Embedded Toolchain: 10-2020-q2-preview	June 29, 2020
GNU Arm Embedded Toolchain: 9-2019-q4-major	November 06, 2019
GNU Arm Embedded Toolchain: 8-2019-q3-update	July 10, 2019

A red box highlights the 'GNU Arm Embedded Toolchain: 9-2020-q2-update' row, and a red arrow points to it with the text 'Click on this toolchain Version'.

3. Click on gcc-arm-none-eabi-9-2020-q2-update-win32.exe
