## Structure in C

```

struct time {
    int hr, min, sec;
}; //
void accept( struct time *p) {
    scanf("%d:%d:%d", &p->hr,
    &p->min, &p->sec);
}
Main()
{
    struct time t;
    accept(&t);
}
    
```

Diagram for C Structure:

hr	min	sec
11		

Annotations:   
 - **7000** is written next to the struct time \*p parameter.   
 - **7000->hr** is written next to the scanf format string.   
 - **7000** is written next to the &t argument in the function call.   
 - A red arrow points from the **accept(&t);** line to the memory box.

## class in C++

```

class time {
    int hr, min, sec;
    void accept() {
        scanf("%d:%d:%d", &hr, &min,
        &sec);
    }
}; //end of class
Main()
{
    time t;
    t.accept();
}
    
```

Diagram for C++ Class:

hr	min	sec
12		

Annotations:   
 - **const** is written next to the class name.   
 - **time \* this** is written next to the accept() function.   
 - **&this->hr** is written next to the scanf format string.   
 - **mf** is written next to the accept() function.   
 - A red arrow points from the **t.accept();** line to the memory box.   
 - A red arrow points from the **t.accept();** line to the text "current obj calling obj".
