

1) Write a function to return simple interest

2) write a function to return compound interest

3) Find and display the largest number of a list without using built-in function max(). Your program should ask the user to input values in list from keyboard.

4).Write a function find\_longest\_word() that takes a list of words and returns the length of the longest one.

5). Define a procedure histogram() that takes a list of integers and prints a histogram to the screen. For example, histogram([4, 9, 7]) should print the following:

\*\*\*\*

\*\*\*\*\*

\*\*\*\*\*

6). Concatenate two lists in the following order by using list comprehension

Input:- list1 = ["Hello ", "take "]

list2 = ["Dear", "Sir"]

Output:- ['Hello Dear', 'Hello Sir', 'take Dear', 'take Sir']
